

I ask that RM-10521 be opposed on the following grounds:

These European radios may not be FCC type accepted.

Current US FRS, MURS, CB and Amateur Radio Frequencies are already in place for use by the general public or licensed radio operators.

Many cellular telephones in Europe are on the GSM standard. GSM is supported in the USA along with Mobitex, the defacto industry standard in over 22 countries.

Internet access is available to anyone visiting the United States at local libraries, universities and hotel chains.

Many PDA or wireless devices, including GSM phones are Internet ready.

Regards,

James Marolda, KE4DRN
